

The Message: Banning the consumption of alcohol around university milieu contributes in improving students' performances.

Target audience:

- . University authorities, Drinking spots Owners , Mayor , Divisional Officer, Student Associations, .Parents

Engaging Stakeholders:

- Channel:** workshops; phone, broadcasting
How: Policy brief; Interactive radio program; SMS

Policy Brief: Key Messages

1. Context: Drinking places surround most universities the world over. Cameroonian university authorities have done very little or nothing about this issue which has so many bad consequences on students' performances.

2. The Problem:

- Drinking of alcohol increase with the opening of drinking spots around universities premises.
- While a student, I noticed that many others who drank heavily fell ill which kept them away from classes. Many failed in exams.
- An average of 5-6 bottles of beer is consumed in one sitting .76.6% of my student survey sample were involved in drinking,
- Drunkenness has often led the students into violence, sexual promiscuity and rape.
- The absence of internal regulations and insufficient extracurricular amenities could push student to drinking.

3.Options

4. implementation considerations

	Barriers	Strategies to overcome barriers
• Implementation of a code on drinking in the university.	Lack of will to execute the code.	Sensitize university community on the necessity of implementing this code.
• Sensitisation campaign (social networking) on the harmful effects of alcohol.	Counter-campaigns might arise.	Continuous sensitisation
• Ban of the sale of alcohol around the campus.	Possibility of resistance from bar owners and students.	• Routine checks in drinking spots • Continuous sensitisation.

Expected effects:

- Students attendance in class and performance in exams have improved.

Indicators:

- The percentage of success in Exam is at the increase.
- The rate of violence caused by drinking reduces steadily in and around the campus
